

Life-HC

Quick tight shell after molting, prevention curved body, opaque muscle

INGREDIENTS:

Calcium (min)	: 7%
Magnesium (min)	: 5%
Potassium (min)	: 1%
Chlorine (min)	: 20%
Sulfur (min)	: 1.5%
Carrier Sodium for enough	: 1 kg
Moisture (max)	: 10%
Antibiotic	: not found

MAIN FUNCTION:

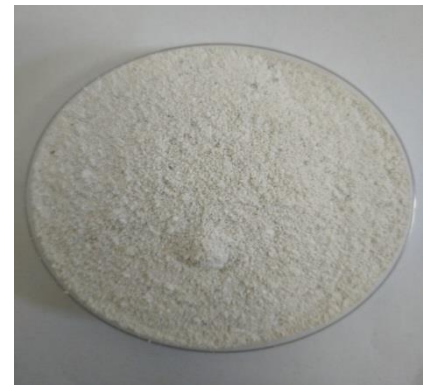

- Supplying essential macro and micro minerals for development and growth of aquatic animal.
- Supplying essential minerals, stabilizing pond environment and helping aquatic animals adapt to change in farming environment.

USAGE&DOSAGE:

Type of products: Suitable for shrimp fish in freshwater and seawater aquaculture, suitable for high density shrimp culture.

Mixing with feed:

Mixing with feed during shrimp culture: 10- 50 g per 1kg of feed.

Applying into pond water:

- Supplying nutrients, enhance survival rate, curved body, quick tight shell and growing.
- After raining or replacing water pond, dosage 500 – 1000 g/1000 m³
- Stimulating shrimp molting, quick tight shell and growth, dosage 500 – 1000 g/1000 m³
- Before harvesting 2-3 hours, use 1000 g/1000 m³ for reducing symptom of soft shell.
- During alive shrimp transportation, use 300-500 g per 500 liter to enhance survival rate of shrimp.

CAUTION:

- Dissolve with water by 1:20 and apply into the pond water.
- Turn on aerator when using for better effect.
- This product is easy moisture-absorbing; it does not affect to performance of product.
